SUMMARY

Product and engineering leader with 7+ years across payments, lending, travel, fashion and education. I work at the intersection of product and engineering — setting direction and sitting in the codebase that executes it, often on the same day. Focus areas are payments and fintech infrastructure: routing, settlements, credit, identity, and the decisions that keep them reliable at scale. Work has included lifting transaction success rates from roughly 78-82% to 96-98%. MBA in Fintech & Blockchain (4.00 CGPA). Currently co-founding and leading three ventures alongside full-time product work.

EXPERIENCE

Echezona Digital Gateway Ltd Product Lead & Senior Frontend Engineer A CBN-licensed Payment Solution Service Provider, powering card, USSD, bank transfer, and virtual account rails.	Jul 2024 - Present

VENTURES

Veem

Co-founder & CEO

A consent-first identity verification and KYC orchestration layer for Nigeria, aggregating BVN and NIN checks and biometric verification into a single confidence-scored identity signal for merchants. I lead strategy and product direction. useveem.com

Rimoswap

Co-founder & CTO

An Africa-first digital-asset platform — trading, wallets, P2P, and stablecoin-based cross-border payments, with live web and Android products. I lead engineering and still write and maintain code. rimoswap.com

Emino Digital Technologies

Founder

A selective software development and technology advisory studio (CAC-registered), taking on a limited number of engagements per quarter. Client work spans fintech, hospitality, and consumer platforms. eminotechnologies.com
